## Introduction

forests are important global resources that provide a wide range of environmental, economic and social benefits. Conserving overall forest area, replanting harvested forests, and managing forests to maintain vigorous growth are all important ways to reduce carbon dioxide accumulation in the atmosphere.

forests are important global resources that provide a wide range of environmental, economic and social benefits. they provide a variety of valuable products.

→

Such as timber, fuelwood, fibres and other wood and non-wood forest products, and contribute to the livelihoods of rural communities. They provide vital ecosystem services, such as combating desertification, protecting watersheds, climate and maintaining biodiversity, and also play an important role in preserving social and cultural values.

## Forest conservation in

### Gariphema village.

In our Gariphema village, the practice of forest conservation is well maintained. Planting trees is the main motive of farmers. Every year thousand of new trees are planted. After every success of them cultivation, we plant new trees for the maintenance of our environment. Every parents have the mentality of planting new trees for the future generations. Besides in forest conservation which also upkeep of the natural resources

within a forest that are beneficial to both humans and the environment.

In our Garuphema village we also follow some rules and laws for our forest conservation.

1) If people by intentionally burn the forest or for the cause lost of forest than the council imposed 10,000 Rs to him / her for the action.

e) Even for the killing animals, or using pesticides, chemicals or some poisonous plants for fishing are also not allowed.

3) Some forest areas are also been reserved for the wildlife protection and forest conservation.

4) As we all know that every village also follow some rules for the hunting; in our village we closed 6 (six) months in a year and at that times hunting, fishing or doing other things are not allowed, which people villagers break the rules at the period of time, the council took action on him.

In May 8, Dimapur (EMU) commemorating its 50<sup>th</sup> anniversary, the Gariphema student union (GUSU) undertook a nature

walk - cum - exploration of historical places in Gariphema on May 4

The programme was sponsored by the Area Gariphema Community Conservation Resolved Forest in association with Biodiversity Management Committee (BMC).

The union further stated that a jubilee plantation drive would be organised on June 5 coinciding with World Environmental Day.

## Conclusion

So as wildlife conservation and forest conservation is necessary for sustainable development.

As forest conservation support life on earth. It maintains quality of water and air, the basic essentials of existence of life. Stability in soil is possible by trees, enables the land based plants and animals to live. In our village we will maintained forest conservation as for the future generations for the better. As every people in our village we protect our forest

and control our forest fire at  
our best. Regulated and planned  
cutting of trees. we also do  
check our forest clearance for  
agricultural and Habitation  
purposes.
